FOR IMMEDIATE RELEASE

Specialty Technical Consultants Chooses XMLComposer

Delta, BC - 19 May 2006

Specialty Technical Consultants (www.stcenv.com) has chosen XMLComposer as the integration technology between Sigmalink and TopLeaf.

XMLComposer is **the** logical choice for integrating virtually **any** content manager with TopLeaf. For STC, the choice was simple: Sigmalink's ability to store, assemble, and deliver XML content would be even more productive for users if a workbench interface to TopLeaf's main features were available, eliminating the bottlenecks associated with delivering proofs to authors and editors. And, with XMLComposer, the ability to compile dozens of sub-documents into a single, assembled PDF, means that Sigmalink's "publication build" feature can be mapped to TopLeaf information directly, permitting XMLComposer to receive a list of ready-to-go TopLeaf documents.

By developing Sigmalink workbench customizations, STC can deliver XML content for processing through TopLeaf completely under XMLComposer's control, eliminating API integration headaches altogether.

Now, in an integrated solution, authors can preview finished documents quickly and easily with drag and drop ease.

Sigmalink, TopLeaf and XMLComposer: An affordable, flexible and winning combination!
