

FOR IMMEDIATE RELEASE

## GENERAL CODE PURCHASES XMLCOMPOSER 3.0

*Delta, BC - 30 Jun 2005*

General Code (Rochester, NY) purchased Metaformix's XMLComposer 3.0 for simple integration of Documentum with TopLeaf 7.

As General Code migrates its content management systems, XMLComposer provided the most straightforward integration connector between Documentum and TopLeaf 7.

This newest release of XMLComposer provides higher functionality and flexibility over previous releases.

General Code (<http://www.generalcode.com>) produces and manages municipal codes for over 1500 US and Canadian cities and towns. The codes are authored in XML and published through TopLeaf, through XMLComposer.

Since 1999, Metaformix has been the exclusive full-service supplier of TopLeaf XML Composition Software for North America. Metaformix offers software and services targetted at document management applications. Metaformix also produces XMLComposer, which allows virtually any content management system to interface with TopLeaf through a watched folder mechanism.
